One case of yellow fever was reported in Habana during the week.

This case occurred in a Spaniard aged 18 years, a resident in Cuba for two years. He resided at Obispo 82, which is in the best business section of the city. He was taken sick on August 19 and entered La Quinta Benefica on the 21st, was reported as suspicious on the 23d, and confirmed as a case of yellow fever on the evening of the 24th instant.

It is believed that the infection in this case was from the same source as that of the one reported on the 15th instant, whose residence was three blocks distant.
